### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Toyota(JP2002130510) in view of Isuzu(JP08004546), both references cited on applicant's IDS.

Toyota disclosed a dual-coil electromagnetic valve actuator having a permanent magnet 38 and an actuator member 24 movable between two extreme positions under the effect of a resilient member (27,28) and two electromagnets each comprising a core having a T-shaped first core portion 33 with a base connected to a central branch with a coil 31 disposed thereabout, the first core portion being placed in a U-shaped second core portion 34 having a base connected to outer branches which extend parallel to the central branch of the first core portion, a permanent magnet 38 being interposed between the base of the first core portion and the base of the second core portion. Toyota did not disclose wherein the base of the T-shaped first core portion extends so as to co-operate with the outer branches of the U-shaped second core portion to present airgaps of size much smaller than a distance between the base of the T-shaped first core portion and the base of the U-shaped second core portion.

Isuzu disclosed a flux shunting core extension 13 between two core portions for forming a gap much smaller than the distance between the core portions bridged by the permanent magnet for the purpose of preventing demagnetization of the permanent magnet by the coil. Since Isuzu and Toyota are both from the same field of endeavor, the purpose disclosed by Isuzu would have been recognized in the pertinent art of Toyota. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ flux shunting core extensions in Toyota for the purpose of preventing demagnetization of the permanent magnet by the coil.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The two cited references disclose flux shunting core portions.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramon M. Barrera whose telephone number is (571) 272-1987. The examiner can normally be reached on Monday through Friday from 11 to 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Elvin G. Enad can be reached on (571) 272-1990. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
